PREFACE

This is the 30th edition of the, GO Design Requirements Manual.

The purpose of the GO Design Requirements Manual is to serve as a reference tool for consultants, designers, and contractors. The GO Design Requirements manual consist of Guiding Principles and technical details for the infrastructure requirements to design and build GO Stations, terminals and facilities.

The GO Design Requirements Manual provide design standards for GO station, terminal and facility location, size, clearances, functional relationships, site development, architectural features, mechanical, and electrical systems. The GO Design Requirements Manual is applicable to new construction and retrofit capital infrastructure programs.

The GO Design Requirements combine the corporate objectives, stakeholder requirements and industry best practices by defining a performance base set of technical requirements and guidelines used as detailed instructions for users. The GO Design Requirements Manual incorporates the valuable feedback we have received from numerous users since the introduction of the reformatted DRM launched in April 2016. For further information, see amendment record.
